

NAME: Mufasa

GENDER: Male

DATE OF BIRTH: December 27, 2020

Mufasa was found as a stray in West Virginia last year and lived with his rescuer and her family for a while. They debated about keeping him because he is such a great kitty, but ultimately, they decided they already had enough cats (is 6 enough? Maybe.... maybe not!!) and reached out to 4Paws to see if they could take him.

Mufasa is well-socialized with people and tries to get into the house from the foster room so he can get pets from his foster mom and sit on her lap. He can be vocal and purrs a lot. He likes other cats and has become buddies with the other cats in the foster room.

Mufasa likes sitting in the sun next to cat friends and playing with all the toys in the foster room. He takes hints to “back off” from some of the other cats that don’t think they know him enough to be friends just yet. He would do great with a busy family with children of all ages. He would also do well with calm dogs if introduced properly.

Mufasa has been vaccinated against rabies and distemper, is FIV and FeLV negative, and has been microchipped and neutered. He has been eating Purina True Instinct grain-free kibble and Fancy Feast classic pate.
