

NAME: Stretch and Snurf

GENDER: Males

BIRTH DATE: April 3, 2022

Meet these two brothers! Snurf and Stretch were rescued in West Virginia. They are looking for a home that will keep them occupied and stimulated. Stretch and Snurf would be great with children and will do best in a very active house with with/without dogs. Their new people

will need to keep these guys active and exercised to prevent them from creating their own mischief. When they were younger Stretch and Snurf were bonded but as they and matured a little more they each made their own friends at Meows Corner. As a result, that initial littermate bond has diminished and we feel that they could be adopted separately.

Stretch has more black spots on his head and body than Snurf. His left eye is a darker green color than his right eye. Stretch is calmer and quieter than Snurf. He likes watching out the windows for any movement in the grass and along the pavement. Stretch is more affectionate and wants to be with people. He sneaks into the front room every chance he gets because he longs to be with people.

Snurf: Snurf has more white spots on his head and body than Stretch. Snurf also won't meow but will yell at other cats if he is annoyed with them or they are eating the food he wants (quite comical!). He has no manners with other cats and his energy level can stress them out. Their foster suspects Snurf may have the same scrappy fearlessness with dogs, so it is recommended that if Snurf is adopted to a house with a dog that it has a low prey drive and high tolerance for feline antics.

Snurf and Stretch have been vaccinated against rabies and distemper, neutered, and microchipped. They both tested negative for FIV and FeLV. They are eating Fancy Feast classic pate and Purina One Indoor Advantage at Meows Corner.
