

NAME: Steve Lasher

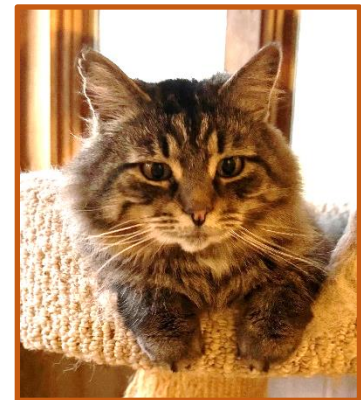

GENDER: Male

DATE OF BIRTH: July 17, 2020

Steve was previously owned by a young lady who couldn't afford to keep him after losing her roommate in this high cost-of-living area. Steve didn't really need to integrate into his foster room because he is so neutral towards all the other cats that no one was threatened by him. He was hissed at a couple times by some of the more tightly-wound kitties but, just like a cat named "Steve" would do, he took it in stride and said "whoa, man – not lookin' for trouble!" and the other cats would calm down. Steve tolerates kitten activity and communally eating with them, even when the older cats don't.

Steve is very easily handled and would be good for a multi-pet house and with kids of all ages. He tested positive for FIV which means his immune system is weaker than FIV- cats' immune systems. As a result, Steve will need a more vigilant owner that is on top of his annual checkups and will take him to the vet as soon as he appears unwell. FIV is not passed outside of cats and is not contagious unless a cat is bitten deeply by an FIV+ cat. Because Steve gets along with everyone, the chances of him passing FIV to another cat is almost non-existent.

Steve has had his vaccinations, is microchipped, and has been neutered. He has tested negative for FeLV. He is eating Fancy Feast classic pate and Purina One kibble.
