

**NAME:** Kuwait kittens

**GENDER:** 1 female & 2 males

**DATE OF BIRTH:** February 14, 2024

**FUR LENGTH:** Short

**COLOR:** grey tabby/white, black, & black/white

**Purrsonality:**

**Children?** We would do well with kids any age.

**Other cats?** We will need to go to a home with active, playful cat < 1 yr old

**Dogs?** We would do well with friendly dogs.

**Background:** These three were found outside in Kuwait and turned over to Savasoul Kuwait, a rescue that vets cats and pays for their transport to the US. This increases their chances of adoption and living their best lives. They were so young they had to be bottle fed, and the vet estimated they were about 3 weeks old when they were found. Cats from a desert environment tend to have larger ears, thinner fur, little to no shedding, and slender, athletic builds. Behaviorally they are more physical in their play and operate at a higher energy level than domestic cats. They still love to snuggle with people and catch naps, even when stacked on each other like pancakes or sitting up!

**Medical or special care notes:** All have been vaccinated for rabies and distemper, microchipped, and altered. They have tested negative for FeLV and FIV. They are eating Fancy Feast classic pate and Purina One kibble.
